

# Ecoflac® plus

## 7 simple steps for use of Ecoflac® plus

1

### TO BEGIN

Check solution with prescription. Inspect batch no. and expiry date of **Ecoflac® plus** container and record. Ensure clarity of infusion solution before administration.

2

### OPENING

To open, grip the container and peel off one section of the covering foil. No need to disinfect the latex free port beneath the foil as this is sterile.

3

### ADMINISTRATION

**Ecoflac® plus** is designed for non vented administration. Having taken the aluminium foil off one port insert the infusion set. All major infusion sets are compatible with the port system.

4

### PRIMING

Prime the line by inverting the **Ecoflac® plus** container and running the solution through the infusion set. The infusion is now ready to administer.

5

### INTEGRATED HANGER

Hang the container by its integrated hanger on the drip stand.

6

### COLLAPSIBILITY

During infusion the **Ecoflac® plus** container collapses in on itself. However, the label will remain legible at all times.

7

### DISPOSAL

On completion of the infusion remove the IV set and dispose of **Ecoflac® plus** according to hospital policy.
